

MrBeast YouTube Performance Analysis

Portfolio Case Study | Excel • Pivot Tables • Dashboard • Data Analysis

Executive Summary

Analyzed 987 YouTube videos (2012–2026) to identify which content themes consistently drive views, engagement, and audience interaction. Built an interactive Excel dashboard and translated raw data into business recommendations.

Project Overview

Objective: Discover high-performing content categories and recommend strategies using historical performance data.

Dataset: 987 videos, 5 columns, sourced via Google Cloud Console / YouTube API.

Data Preparation

- Standardized upload dates
- Converted view metrics into numeric values
- Engineered content categories (Money, Survival, Challenge, Endurance, Other)
- Calculated engagement rate KPI

Dashboard Highlights

Interactive KPI dashboard including Total Videos, Views, Likes, Comments, Category Performance, Upload Trend, Engagement Trend, and Top Performing Videos.

Key Business Insights

1. Money and Survival content generate the highest average views.
2. Endurance videos achieve the strongest engagement rate.
3. Money-themed videos attract the highest comment volume.
4. Lower upload frequency coincides with higher average views, indicating quality outweighs quantity.

Business Recommendations

- Prioritize high-performing Survival and Money content.
- Maintain a balanced content portfolio to sustain engagement.
- Optimize publishing strategy around quality rather than upload frequency.
- Continue monitoring engagement KPIs to refine future content decisions.
